ONE PLATFORM

Fourteen modules. One dashboard. Nothing missed.

TPR Max brings everything under one roof. Sign in a visitor. Check a contractor's documents before they walk through the gate. Run an emergency evacuation and know who's on site in seconds. Schedule a maintenance job and track it through to completion. No jumping between systems. No gaps in the records. No 'I thought someone else was handling that.' The platform replaces the paper sign-in book, the shared spreadsheet, the laminated induction form, and the fire marshal clipboard. All of them. Every action is logged, timestamped, and auditable.

VISITOR MANAGEMENT

Digital sign-in, photo capture, QR codes, pre-registration, and automatic host notification on arrival.

CONTRACTOR COMPLIANCE

Inductions, RAMS sign-off, and document expiry tracking enforced before any contractor can check in.

EMERGENCY MUSTERING

One-click evacuation with live head counts, fire marshal mobile access, and automatic incident reports.

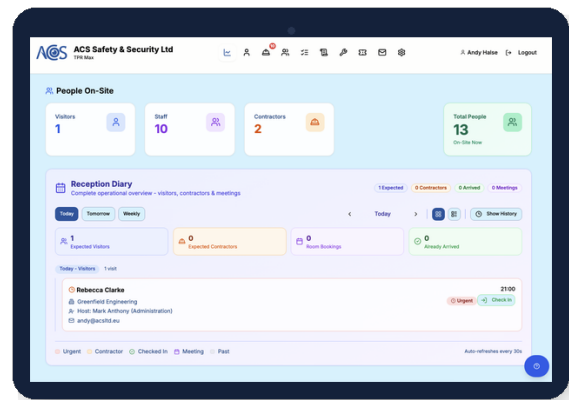

PPM & MAINTENANCE

Asset register, maintenance schedules, and mobile work orders — all in the same platform.

EMERGENCY MUSTERING

Know who's safe. Know who's missing. In real time.

When the alarm goes off, you have one job: account for everyone on site. TPR Max gives you a single screen to do it. One click starts the evacuation. Fire marshals get a static URL they can open on any phone — no login, no fuss. People who left before the alarm can mark themselves safe by email. Each zone has its own muster point with live counts and a list of who's still unaccounted for. When it's over, the incident report is generated automatically.

ONE-CLICK EVACUATION

Every visitor, contractor, and staff member is pulled into the live muster list instantly. No manual list required.

FIRE MARSHAL ACCESS

A static URL means marshals check and update from their phone without logging in — even mid-emergency.

SELF-MARK-SAFE

People who left before the alarm mark themselves safe via an email token. Off the missing list immediately.

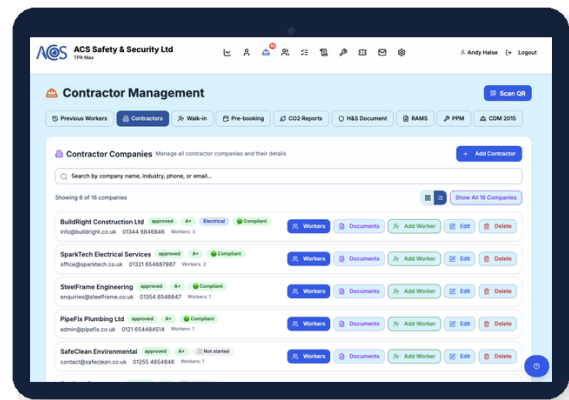

MARTYN'S LAW MODULE

Terrorism preparedness checklist, lockdown procedures, and Run, Hide, Tell training tracker for venues in scope of the Protect Duty.

CONTRACTOR COMPLIANCE

If their paperwork isn't right, they don't get in.

If a contractor gets hurt on your site and they weren't properly inducted, or their insurance had lapsed, that's your problem. TPR Max makes sure it never gets to that point. Before anyone checks in, the system verifies their induction is complete, their documents are in date, and they've signed off the relevant RAMS. If anything's missing, access is blocked. Every step is logged — so the evidence trail is there when you need it.

CONTRACTOR PROFILES

Every company, every worker. Documents stored centrally and flagged automatically before they expire.

INDUCTION MANAGEMENT

Custom inductions per site. Contractors complete them before they arrive. No induction — no access.

RAMS MANAGEMENT

Risk Assessment & Method Statement sign-off built into the check-in process. Proof of acceptance logged on every visit.

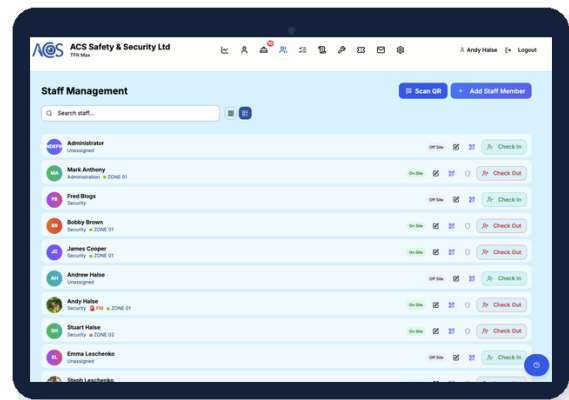

COMPLIANCE TRACKING

Certificates, qualifications, insurance, CSCS cards. Expiry dates tracked automatically.

LONE WORKER SAFETY

Know your people are safe, even when no one's watching.

Some jobs mean working alone. A lone worker who can't be reached — or who hasn't checked in when expected — is a serious safety risk, and a legal one too. TPR Max handles this with a simple token-based check-in system. Workers confirm they're safe at set intervals. If they don't, the right people are notified straight away. No expensive devices. No separate app. Works through the same platform everything else does — nothing new to learn.

TOKEN CHECK-IN

Workers confirm they're safe via a unique link — any phone, no app, no login required.

CONFIGURABLE INTERVALS

Set check-in frequency by role and risk level. High-risk tasks get shorter intervals.

AUTOMATIC ALERTS

Missed a check-in? The right people are notified immediately. No manual monitoring required.

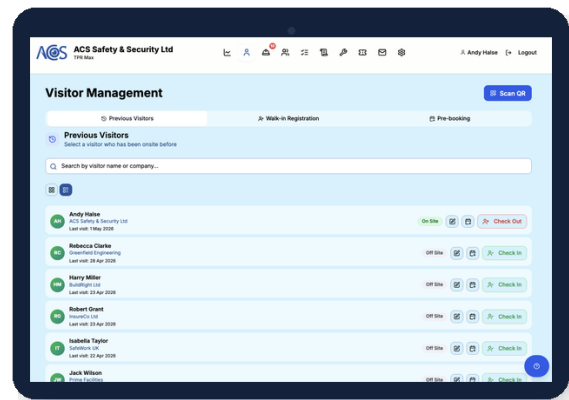

FULL AUDIT TRAIL

Every check-in and alert is logged. Duty of care evidence is already there if you need it.

VISITOR & STAFF MANAGEMENT

Check-in, attendance, ID passes — all in one place

Visitor check-in goes digital: photo capture, digital signature, and automatic host notification. Pre-register guests and they get an email with a QR code — check-in takes seconds when they arrive. Staff attendance is tracked through check-in and check-out, with daily, weekly, and monthly reports as PDF or CSV. If you run Biostar 2 access control, TPR Max syncs with it bi-directionally — badge swipes feed straight into the attendance log.

VISITOR CHECK-IN

Photo, signature, QR code pass. Pre-registration with email invitations. Host notified automatically on arrival.

PASS PRINTING

Visitor and contractor passes print over your network to a thermal printer. No drivers needed — true SaaS printing.

STAFF ATTENDANCE

Real-time tracking, detailed reports, CSV export. Bi-directional sync with Biostar 2.

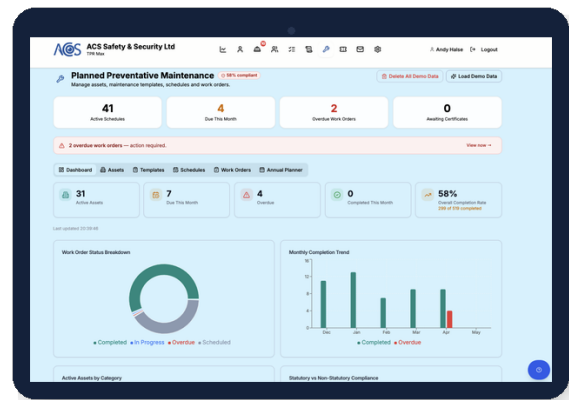

TIME & ATTENDANCE

Full session logs per staff member. Daily, weekly, and monthly summaries ready for payroll or audit.

PLANNED MAINTENANCE

Schedule it, track it, prove it was done.

Reactive maintenance costs more than planned maintenance. Most organisations know that — but still manage their assets on a spreadsheet that nobody updates. TPR Max's PPM module gives you an asset register, maintenance schedules, and work order management in the same platform you use for everything else. Set up your assets, define how often they need servicing, and the system generates work orders automatically when they're due. Engineers complete jobs on mobile, and the compliance record builds itself as they go.

ASSET REGISTER

Every piece of equipment, plant, and infrastructure in one place with full service history.

MAINTENANCE SCHEDULES

Set frequency rules per asset. Work orders generated automatically when due — no manual chasing.

MOBILE WORK ORDERS

Engineers complete jobs on any device. Digital sign-off logged against the asset record instantly.

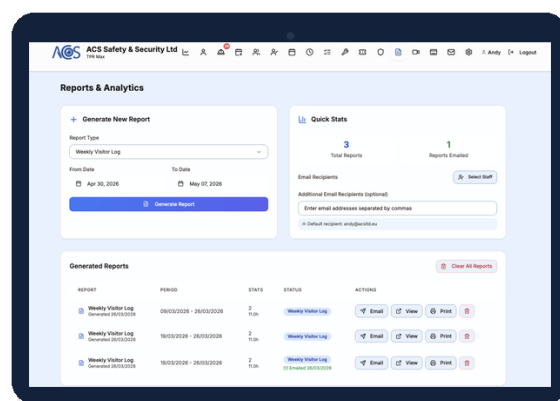

COMPLIANCE CHECKLISTS

Regulatory references and completion checklists built into every job type. Audit-ready from day one.

BUILT-IN AI

Your site data, turned into useful information.

TPR Max has AI tools built in — not bolted on as an add-on. They use the data your site already generates to surface insights you'd otherwise have to dig for yourself. The ROI calculator gives you the financial case in your own numbers — useful when getting sign-off from finance or making the case to a board. Business insights flag anomalies and trends in your visitor and contractor data automatically. Flow optimisation shows where your check-in process creates bottlenecks.

BUSINESS INSIGHTS

Pattern recognition across your site data. Flags anomalies and trends without you having to go looking.

ROI CALCULATOR

Shows the financial case for TPR Max in your own numbers — time saved, admin reduced, risk exposure cut.

FLOW OPTIMISATION

Analyses how people move through your site and identifies where the process slows down or breaks.

COMPETITIVE ANALYSIS

Benchmarks your site safety processes against sector data — useful for board reporting and insurance reviews.

SECURITY & DATA TRUST

Each customer on TPR Max gets their own isolated database. Your data doesn't sit in a shared table filtered by a customer ID — it's physically separate from everyone else's. That's a genuine enterprise architecture decision, not a marketing claim. GDPR compliance is built in from the ground up. Every customer gets a right-to-be-forgotten tool, full data export, and role-based access that controls exactly who can see what.

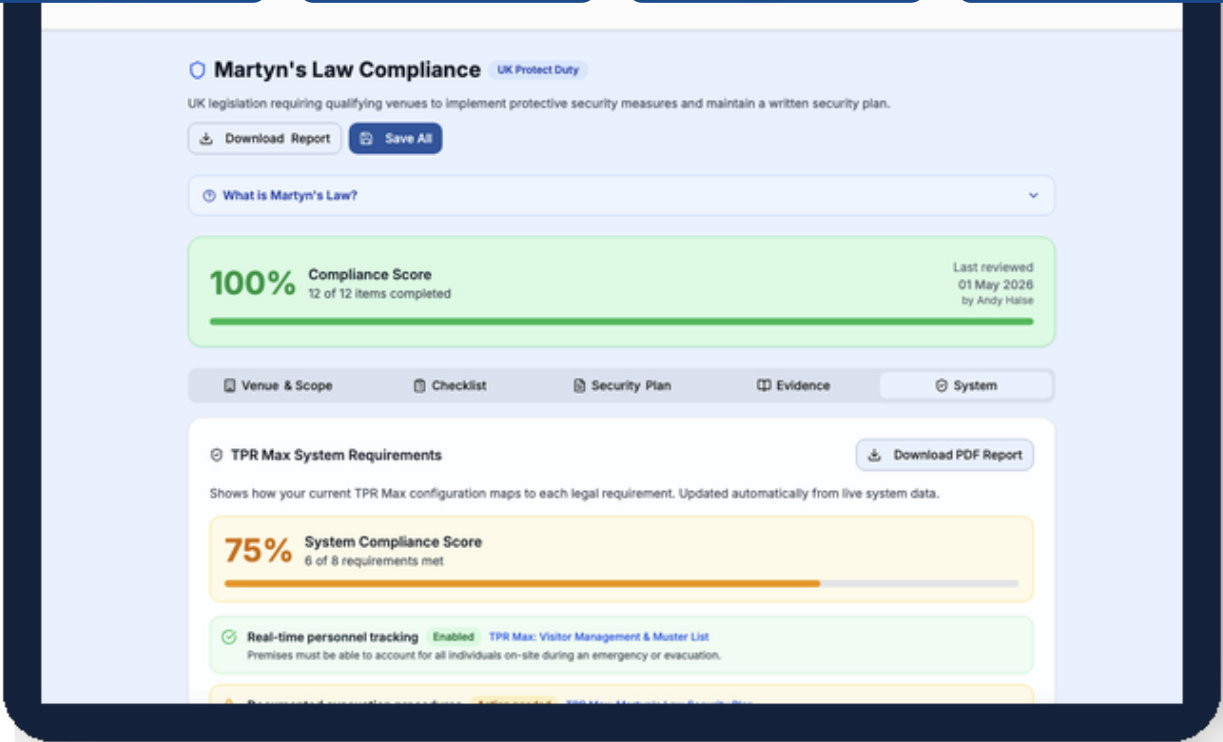

The platform is ISO 27001 aligned. Security includes CSRF protection, bcrypt password hashing, and encrypted sessions throughout. Full audit trails log every action — who did what, when, and from where. If you're audited, or an incident is investigated, the evidence is already there in a format you can hand over without scrambling. Your data never moves outside your isolated schema. No shared infrastructure, no bleed between customers.

Isolated Database
Per-customer schema architecture.

GDPR Compliant
Right to be forgotten, full data export.

ISO 27001 Aligned
Information security management standards.

Full Audit Trails
Every action logged, timestamped, searchable.

TPR Max: Visitor Management & Muster List

Premises must be able to account for all individuals on-site during an emergency or evacuation.

BUILT FOR SITES WHERE SAFETY ISN'T OPTIONAL

8 sectors that rely on TPR Max every day

TPR Max is for any organisation that has contractors, visitors, or temporary workers on site — and needs to show it managed them properly. Manufacturing, construction, healthcare, education, logistics, local government — if a compliance failure or emergency would put you on the wrong side of a regulator, this is for you.

Manufacturing & Industrial

High contractor footfall, strict H&S obligations, regular audits.

Construction Sites

Rotating workforce, RAMS requirements, site induction compliance.

Healthcare

Contractor vetting, visitor records, infection control sign-off.

Facilities Management

Multiple sites, multiple contractors — one place to manage all of it.

Logistics & Warehousing

Shift-based staff, delivery contractors, emergency procedures.

Education

Safeguarding-compliant visitor management, contractor DBS tracking.

Local Government

Audit trails, compliance evidence, public duty obligations.

Serviced Offices & Co-Working

Multi-tenant management for shared buildings.

Free for 14 Days.
No Card Required.
